

Template for a psychogeophysical report

- detail

- date and time of report commencement

-

- where is the site? (GPS co-ordinates)

-

- names of investigators

-

- weather

-

- how was the site divined?

(eg. algorithmic walk, scrying, remote viewing, electromagnetic suggestion (electrometer or RF meter, magnetometer), symptoms, skin resistance, intuition, suggestion, ley-line mapping, sudden change in temperature)

- were there any immediate anomalies associated with the site?

(anomalous measurements, behaviours, intuitions, imaginations)

- a rough description of the site

-

-

-

-

-

-

-

-

-

- including a sketch of the site

-

- **impressions and intuitions of the site**

-

- **impressions of the observer and act of observation**

-

- studies/surveys conducted at the site?

suggested surveys:

wide area: scrying, soil resistance, dowsing or use of pendulum, bousing, biological response survey (GSR, heartrate)

local: underground observatory, excavation, EVP recordings, thoughtographic studies, lichenometry, proposed divination methods

- results of those surveys?

- time

-

- logs of plots/graphs/images/recordings

-

- surveys revealing substrates or objects for further investigation?

- list of substrates and what interventions were made on this substrate?
-

Substrate identifier	substrate intervention	results of intervention/reference

- suggested interventions:

Processes such as: hitting, heating, dissolving, electrical (potentials), electrochemical, magnetic, chemical, crumbling, wetting, adding to, mixing, scraping, inscription/insertion, playback of surfaces/rubbing

and simple substrate correspondence classification tests:

scratching, grinding or streaking substrates on hard surface eg. kerbs, colour and lustre, form, cleavage (hammer), magnetism (magnets/compass), taste, vinegar(calcite), smell

- conclusions and findings
